

To: All Geometry Students who missed class on Monday, March 2nd:

Here are some videos to watch to learn about the Law of Sines & Law of Cosines. These laws are to be used to find all missing sides and all missing angles in non-right triangles. If you had a right triangle, you would use either the Pythagorean Theorem or the Trigonometric ratios.

As you watch these videos, take notes in your spiral. After you do that, you can start working on the homework. It's a worksheet for solving non-right triangles (all sides and all angles). The homework will be a link on my website next to the link where you found this document.

See you on Wednesday!

Ms. Grant
